#### Recent Projects:

**BB Store Lookup** – A utility website that allows users to quickly go from a popular retailer's internal store number to an actual location and address on the website. This improved the workflow from 5 keystrokes and 2 fetch requests to simply 1 keystroke, saving my team of 203 salespeople 228 man hours of labor per month. A web scraper ensures data accuracy. Built with React, Node and Puppeteer.

**BB Price Tracker (Fullstack Web App)** – A price tracking website that allows users to enter a desired item and price from a popular retailer, and the website will alert the user when the item falls to the given price. A web scraper pulls the pricing info daily. Built with React, Express, Node, MongoDB, Puppeteer.
